desmondddm.com

Product-minded builder with 6 shipped products across B2B SaaS, marketplaces, AI tooling, and consumer iOS. The product that reached 20,000+ users at Changi Airport Group worked because the organisation solved distribution. That's the insight that drives the move into PM. Full product stories at desmondddm.com

PROFESSIONAL EXPERIENCE

Changi Airport Group | Implementation Manager *2022 – Present*

- Product-managed the airport-wide Security Awareness Guide and digital training modules – reaching 20,000+ users across a large regulated organisation.
- Solo-developed AI tools using Google Gemini that improved operational outcomes by 50%, owning the full cycle from problem definition through build and deployment.
- Led discovery with internal teams and vendors to surface workflow inefficiencies – translating user pain into clear product requirements for digital and process solutions.
- Managed end-to-end rollout of tools and products including communications, training, user education, and adoption tracking.

Product & Software Projects | Founder & Developer *Ongoing*

- Independently built and shipped 5 products – running the full cycle from problem discovery and MVP scoping to build, launch, and iteration.
- CarrotByte (carrotbyte.io): B2B CRM for myopia clinics. Cold-email'd first paying customer; validated B2B demand through direct outreach.
- CoachConnect (coachconnect.sg): Two-sided marketplace for coaches and clients. Solved supply-side acquisition; surfaced cold-start demand as the defining marketplace challenge.
- Stenify.ai (stenify.ai): Hackathon-built AI transcription with custom chunking pipeline. Winner; identified hardware as a physical constraint beyond code.
- DayOne App (dayoneapp.fit): iOS progressive training app. Applied keyword-first ASO strategy – demonstrated that distribution is a product problem on the App Store.
- RoxPacer (Temp Vercel site): Hyrox race pacing app built market-first – keyword research and competitive sizing completed before architecture.

Core Competencies

- Product: Discovery & requirements · MVP definition · Roadmap planning · User research · Go-to-market
- Technical: AI assisted coding · API integration · AI tooling · Power BI · Tableau
- Delivery: Stakeholder management · Cross-functional rollout · Training design · Adoption tracking

WHAT SETS ME APART

Indie Builder with Full Product Lifecycle Experience

- Independently shipped 6 products across B2B SaaS, two-sided marketplaces, AI tooling, and consumer iOS – running the full lifecycle from discovery through go-to-market without a team each time.
- Built and integrated complex APIs across multiple live products including WhatsApp, email automation, and AI models including Google Gemini and ElevenLabs.
- Validated across consumer and enterprise: early revenue with CarrotByte, 20,000+ enterprise users at Changi Airport Group, and two live iOS apps on the App Store.
- Builds market-first: keyword research and competitive sizing before architecture – applying each product's distribution lesson to the next build.

AI-Native Product Thinker

- Solo-developed AI tools at Changi Airport Group that improved operational outcomes by 50%.
- Actively integrates AI into product development workflows – from ideation and prototyping to deployment.
- Builds with a technical-first mindset: understands API constraints, data structures, and system architecture.
- Positioned to bring an AI-native perspective to product teams building the next generation of intelligent software.
